## EXPERIENCE SUMMARY

Dedicated and detail-oriented Software Engineer seeing an opportunity to become part of a team using my skillset to further our client interests, business needs, and provide software solutions to provide data-driven decisions and business needs. Experience includes web, blog, and application development.

---

## COMPETENCIES

- Management & Supervision (4+ yrs)
- Programming & Diagnostics (4+ yrs)
- Web Development (1 yrs)
- HTML (1 yrs)
- CSS (1 yrs)
- JavaScript (1 yrs)
- Express.js (1 yrs)
- Sequelize (1 yrs)
- MongoDB (1 yrs)
- React (1 yrs)
- Node.js (1 yrs)
- JWT (1yrs)
- Git (1 yrs)
- REST API (1 yrs)
- Handlebars (1 yrs)
- MS office suite, Excel, PowerPoint, Outlook (6+ years)

---

## CERTIFICATIONS AND RELEVANT TRAINING

- Full Stack Software Engineer Certification – University of Texas
- Associates in HVAC Technician

---

## ENGINEERING/DEVELOPMENT SAMPLES

| Musicology— Music Social Media App                                                                                                                                                                                                                           |                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| An app designed to link and socialize with musicians. Create your own band and link with different events with this app. This app is built using React, Node.js, MongoDB, Express.js, JWTs and much more.                                                    | <a href="https://musicology-umekev.herokuapp.com/">https://musicology-umekev.herokuapp.com/</a>       |
| Tech Blog — Blog App                                                                                                                                                                                                                                         |                                                                                                       |
| This app is a tech blog app. Its purpose is to create a blog site where users can login/signup and view their posts and comments on other posts as well. This app was built using MySQL, JavaScript, CSS, HTML, Handlebars, Express.js, Sequelize, and more. | <a href="https://blog-post123456.herokuapp.com/">https://blog-post123456.herokuapp.com/</a>           |
| Budget Tracker— Budget Tracking App                                                                                                                                                                                                                          |                                                                                                       |
| An app designed to track the budget for an individual. The app uses Express.js, MongoDB, HTML, Node.js, JavaScript.                                                                                                                                          | <a href="https://budgettracker1234567.herokuapp.com/">https://budgettracker1234567.herokuapp.com/</a> |
| All Pizza   Pizza Hunt — Pizza Ordering App                                                                                                                                                                                                                  |                                                                                                       |

|                                                                                                                                                                                                                        |                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| An app designed to let you order pizza and save your favorite orders. Also has a messaging and commenting feature. This app was built using MySQL, JavaScript, CSS, HTML, Handlebars, Express.js, Sequelize, and more. | <a href="https://powerful-sierra-70551.herokuapp.com/">https://powerful-sierra-70551.herokuapp.com/</a> |
| <b>Note Taker— <i>Note Taking App</i></b>                                                                                                                                                                              |                                                                                                         |
| An app designed to take brief notes and save them in your log on the side. Built with JavaScript and Express.js                                                                                                        | <a href="https://polar-ocean-59524.herokuapp.com/">https://polar-ocean-59524.herokuapp.com/</a>         |
| <b>Weather For You— <i>Weather App</i></b>                                                                                                                                                                             |                                                                                                         |
| An app designed to show the current weather and the weather for the next 5 days. This app was built using JavaScript, HTML, CSS, and the REST APIs                                                                     | <a href="https://gpain2007.github.io/Your-weather/">https://gpain2007.github.io/Your-weather/</a>       |

## **EXPERIENCE DETAILS**

### **Endeavor, Austin, TX | Building Engineer** **September 2020 to Present**

- Coordinated schedules for maintenance of HVAC systems, Fire Life and Safety, Elevators, Irrigation and Drainage Systems. Supervised vendor performance and checked quality of workmanship
- Partnered with Trane to install BACnet and Trane Tracer SC+ to program BAS system for building Trane SCU Air Conditioning.
- Installed system logic using WinDSXlink. Linked network point for building access to WinDSXlink system onsite.

### **CBRE, Austin, Texas | Chief Building Engineer** **April 2014 – August 2020**

- Managed and supervised a team of 5 engineers for the Austin, TX and San Antonio, TX regions.
- Provided Training of HVAC Preventive Maintenance Program and evaluated technical expertise of the individual engineers.
- Assisted with performance reviews and improvement plans for supervised team.  
Coordinated schedules for maintenance of HVAC systems, Fire Life and Safety, Elevators/Escalators, Plumbing, and Irrigation and Drainage Systems. Supervised vendor performance and checked quality of workmanship

### **Millian Air Conditioning, Austin, TX | HVAC/Control Tech** **May 2013 – March 2014**

- Performed HVAC repair and maintenance for 22 locations in Austin, Houston, and Dallas areas.
- Performed BAS installation, diagnostic, and repair using Matlab, Python, C+, Ladder Logic.
